Professional Summary

Software Engineer with 1 year of experience automating workflows and building dashboards using Python, Flask, React, and MySQL. Currently pursuing a Post-Graduate Diploma in Artificial Intelligence at Georgian College, with hands-on projects in machine learning, computer vision, and cloud deployment.

Technical Skills

Languages: Python, SQL

Frameworks & Libraries: React, Node.js, Flask, FastAPI, Express

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, Lambda), Azure, Docker, Git, CI/CD (GitHub Actions)

AI & ML: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy

Methodologies: Agile Scrum, TDD, RESTful API Design

Experience

Junior Software Engineer | Tahir Hassan Electromechanical Services – Dubai, UAE Jul 2022 – Aug 2023

- Automated data-entry workflows with Python & MySQL, reducing manual effort by 40% and raising accuracy to 99%.
- Built a Flask + React dashboard to visualize maintenance KPIs for 12 site managers, accelerating ticket resolution times.
- Integrated REST APIs with SAP to sync project costs, eliminating weekly spreadsheet reconciliations.
- Resolved 30+ bug tickets within 24 hours, consistently meeting SLA targets and improving system reliability.

Academic Projects

- Disaster Tweet Classification (BERT)** – Built NLP pipeline for real-time disaster detection from tweets; improved classification accuracy with transformer models.
- CIFAR-10 Image Classification** – Implemented EfficientNet models in PyTorch; optimized accuracy through baseline vs. improved model comparison.
- RestoreAI (Client Project)** – Designed dashboards and synthetic datasets to demonstrate cost/time savings in contractor-trade agent workflows; presented to industry client.
- JetBot Robotics (Jetson Nano)** – Built self-driving robot combining road following + collision avoidance
